

Reimagined SAFe® collaboration

Since 2020 we all know that face-to-face communication between remote teams is a real challenge for many of us, including RTEs and STEs. By providing a 100% SAFe aligned platform piplanning.io helps for distributed PI Planning in a way that assists in the improvement of productivity between the teams.

Dependency management

piplanning.io is the only tool that enables a face-to-face dependency handling flow in a digital world without creating chaos. You can not only share dependencies within your ART but also trigger the right conversations across multiple ARTs. It feels as if you would walk to this other team and say “Hi folks, we must talk about a dependency.”

Bidirectional ALM-sync

The comprehensive bidirectional synchronization with Jira, Rally, and Microsoft Azure DevOps is unprecedented in the visual collaboration tools market. There is no more manual copy-pasting, human errors, and inconsistencies. Everything your team plans is teal-time synchronized with your ALM tool.

Focus on people & interaction

piplanning.io empowers RTEs to lead successful PI Planning events without distraction, ensures alignment and focus across all the teams. Through real-time movement, it provides an in-person feeling for all participants always being aware about who is on the board and editing sticky notes. Collaborating feels just like being in the same room, in front of the same board. You can enjoy a pen & paper-like experience.

Get a free trial to experience how you can improve productivity within your teams, across ARTs: <https://trial.piplanning.io>
