

My name is Peter Pedross. I am CEO and founder of PEDCO and I am looking forward to meeting you in person at the RTE Summit and talking about our experience with 'Scaled Agility in Regulated Environments.

**PEDCO's tagline is bringing Lean-Agile organizations to life!**

How do we do that? With our product Applied SAFe:

Applied SAFe is an extendable, customizable, tailorable, and ALM tool-agnostic structured description on how to achieve business agility in a regulatory-compliant way. Applied SAFe satisfies lean-agile principles AND compliance standards, allowing organizations to demonstrate that their systems meet their intended purpose without causing harm. It provides measures for objective evidence required to prove conformance to defined standards and regulations. - This is not just a simple promise. It has been proven by several instances in various regulated industries.

**[Come to our booth and let's have a talk!](#)**

We are supporting Applied SAFe with our engineering services, training, and, after all, with our global network of transformation partners. There are more than 60 transformation partners globally right now and they are all trained to understand and to guide you through wards the application of the scaled agile framework, in complex and regulated environments.
