3-GIS | Network Solutions

Planning and design	Data conversion	Consulting	Training

A partner for an evolving utility industry

Network deployments are the future for utility companies to bring business growth and new services to their customers. At 3-GIS, we lead our service engagements with industry expertise so that you deliver fiber predictably. 3-GIS | Engineering Services brings a team of fiber network engineers, outside plant (OSP) engineers, project managers, GIS and database experts, using our world-class software to solve the fiber deployment and management needs that are unique to the utility market.

> Create buildable fiber network designs with unsurpassed precision
> Scale your production rapidly
> Improve controls
> Plan to manage your network in an end-to-end collaborative system

Planning and design engineering

Save time and reduce costs by partnering with our design services team to plan and design your next fiber network. Our team uses all the 3-GIS applications to validate the network design, evaluate attenuation for each path, and ensure design parameters are met throughout the design.

Data conversion

We have the tools to get your existing data from your legacy system to our automation-ready 3-GIS data model. Our services make it easy for you to gain the full functionality and power of 3-GIS software and the advantage of having all design, construction, and operational network data in a single system of record.

Consulting

Our consulting services provide you with professional advice and feedback to make sure your projects start off on the right foot and stay that way. We'll help you build the dashboard views into your projects that break down data silos and share physical network data crucial for informing business and operational decisions.

Training

People, processes and systems is a tried-and-true mantra for implementing new technology that improves the business results. 3-GIS applications are designed to have users operational in a day. Our bespoke, online, and in-app training offer three ways your users will learn and start using 3-GIS software to build ever more efficient processes.

About us

3-GIS, an SSP Innovations company, empowers the utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex fiber networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionize the potential and realize the market opportunities of fiber assets. Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of fiber networks; creating a more connected, informed, and lighted world.

Contact us and discuss how 3-GIS can add more speed and efficiency to your network deployment.
