

# What can APIs do for CSPs?

Orchestrate processes that boost the communications service provider's bottom line

## Improve data integrity

Maintain a single database for your outside plant assets to eliminate duplicate data entry.

## Decrease response time

Connect with outage reporting systems to dispatch trucks sooner and track outage trends over time.

## Understand assets inside out

Automatically record changes from your inside plant systems to keep up with serving ports.

## See construction status in real time

Get updates needed for budgeting and invoicing during the project lifecycle, and react to potential issues sooner.
