Job-at-hand simplicity

Your fiber network data available onsite all the time with 3-GIS | Mobile

3-GIS | Mobile is the field application that addresses the challenges of designing, building, and restoring fiber networks in a time sensitive manner by putting network data directly in the hands of field crews, keeping system records accurate, improving efficiencies of critical rideouts and providing real-time network information.

What you can do with 3-GIS | Mobile

By enabling mobility, field engineers have a solution that allows them to work offline and synchronize their updates upon connection, giving you the information to keep your system records accurate. With its configurable interface to support the job-at-hand, field crews get access to tools and information they need for to perform their work with minimal clicks.

About 3-GIS | Mobile

3-GIS | Mobile allows field users to view, edit, and place network features from their mobile device. Users can relocate features utilizing GNSS, adjust feature attributes, reshape linear features to more accurately depict how they exist in the real world, and track task status.

Key features

- > Redline network data in the field
- > Conduct inspections and attach photos
- > Trace the location of an outage
- > Generate reports
- > Propose network connections
- > Share data immediately with 3-GIS | Web users
- > Inform of task progression
- > Access and update work orders
- > Limit user access
- > Android compatible
- > Dynamic caching
- > Seamless synchronization
- > GNSS integration and capture
- > Minimal training required

Service security and compliance

Confidentiality and availability of our customers' information are critical to their success. In order to support requirements for security groups (virtual firewall) advanced encryption, subnets, IAM, VPC (including ingress and egress controls), 3-GIS is hosted by Amazon Web Services (AWS). AWS is aligned and compliant with most industry and some government regulations and standards including ISO/IEC 27001/2. We utilize relevant standards as we configure our solutions in the AWS cloud infrastructure. AWS offers secure solutions for highly sensitive data such as government agencies and departments as well as private firms.

About us

3-GIS, an SSP Innovations company, empowers companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex fiber networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionize the potential and realize the market opportunities of fiber assets. Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of fiber networks; creating a more connected, informed, and lighted world.
