

Base Station Installation and Upgrade

North America

Business Issue

Manage, install and upgrade base station equipment for multiple customers in markets across the country.

A telecommunications services company needed a large number of skilled personnel to assist them in Engineering, Furnish and Installation (E, F & I) activities for multiple customers. The responsibilities spanned from overall project management and supervisory roles to installation technicians.

Solution

Manpower Engineering supplied the client with a selection of people with the various skills needed to fulfill their obligations. These people were dispatched to a variety of markets to perform their functions.

Results

Manpower Engineering met the client's pressing need for competent people of all levels and continues to increase its role with the client.
