

Network Modernization

North America

Business Issue

Assist with RF planning and design and physical deployment and integration of the client's network modernization initiative.

A large telecommunications company undertakes a nationwide network modernization initiative to expand existing capacity and upgrade technology. To accomplish their goals, skilled RF Engineers and Installation Technicians are needed to plan and deploy cost effective solutions.

Solution

Manpower Engineering located, screened and on-boarded numerous engineers and technicians for work across the United States. Individuals were pre-screened in accordance with defined requirements, and candidates for key roles were further scrutinized by our team's Telecom Subject Matter Expert.

Results

Manpower Engineering quickly delivered competent candidates, meeting the client's resource needs and schedule requirements. Client managers have expressed their satisfaction with the Manpower Engineering Team and continue to make requests for other opportunities.

"Your engineers have all been good. Manpower Engineering does a fantastic job of digging in to understand my project requirements. Thank you for pre-screening to be sure the people you provide have the skills to perform the required work."

- Senior Manager, RF Design
