

Measuring for Your MENSOLA Computer Mount

Print this document out and fold the sheet where it is indicated. Measure the distance between one bolt hole to the other. For accuracy, the arrow should line up to the middle of the bolt hole and not the bolt head. Example shown below.

PLEASE NOTE: A mm is incrementally a rather small measurement, as you can see. If are you are in doubt, please contact us at sales@silca.cc for further instruction or provide the stem manufacturer.
