

ModuleQ for ESG

Stay up to date on meaningful ESG information.

Believe it or not, there is an incredible amount of ESG data and information available to rating agencies and risk managers who have the time to pore through it. This includes companies using a combination of AI and trained analysts that spend tens of thousands on documents in over one hundred different languages which include detailed analysis about recent events. These reports are focusing mainly on details related specifically with Earth-friendly practices such as renewable energy sources, recycling efforts for plastics, etc., but also detail everything from human rights violations to political unrests around the world.

ModuleQ provides accurate and up-to-date information on organizations environmental sustainability, social impact, and governance standards. Our People-Facing Al® helps individuals stay up to date on organizations' ESG ratings in real time so they can be more effective at work. We use artificial intelligence to help people make better decisions by providing them with personalized newsfeed directly in Microsoft Teams. ModuleQ also helps teams collaborate more effectively by bringing contextually relevant information into their discussions - without interrupting or distracting them from what they're doing.

News Update

KEEP ENVIRONMENT, SUSTAINABILITY, AND GOVERNANCE (ESG) TOP-OF-MIND

REFINITIV[®]

WHY ESG SHOULD BE A PRIORITY

As complexity increases with the global scope of these issues, companies may find that their former strategies will no longer work to combat them or even mitigate risk from factors beyond their control. With sustainability challenges introducing new risks for investors organization are looking for a smarter way to get to ESG information.

Business priorities are evolving into global priorities

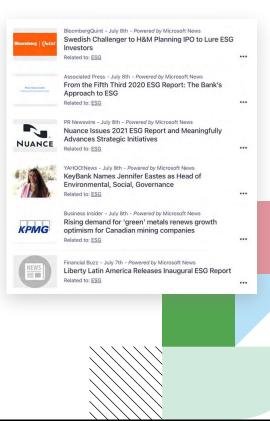

The unpredictable nature of global challenges such as climate risks, increased regulatory pressures, social and demographic shifts, and privacy concerns poses a new challenge for investors.

Workforce generational shift

In a recent survey, Bank of America Merrill Lynch said that they could "conservatively estimate" USD 20 trillion in assets growth for U.S.-domiciled ESG funds over the next two decades due to millennial investments and international interest from investors around the world

ESG data enables more strategic conversations

Al can minimize our reliance on voluntary disclosure from companies by using ML and natural language processing to see dynamic content with ESG insights as they happen.
