## PRESSURED TO DO MORE?

With cybersecurity and other risks in the forefront, IT organizations are now required to take on and manage a greater number and variety of technologies—at an alarming pace! The mounted pressure to stay on top to keep these technologies running can quickly overwhelm and overextend IT personnel. As a result, time consuming tasks such as maintenance and other repetitive infrastructure management routines run the risk of falling through the cracks. These tasks are often critical to a business' security posture and if not performed in a timely manner or even worse, not at all, can put a business in a vulnerable position.

## SYSTEMATIC IT MANAGEMENT PLAYS A CRITICAL ROLE TO ENSURE AN EFFICIENT, STABLE INFRASTRUCTURE

Locknet's® NetxusPlus is a variety of easy and efficient, custom tailored automated solutions designed to help IT teams stay on top of maintenance and other management routines. Automated service features include endpoint, network and computer management as well as security monitoring services to help keep your infrastructure maintained, optimized and productive.

## MAXIMIZE IT EFFICIENCY, DETECT ISSUES AND AVOID SYSTEM FAILURES WITH PROACTIVE IT AUTOMATION

### Remote Monitoring and Management (RMM)

Proactive automated monitoring and notification of issues to mitigate risks before they become disruptive to your business. Monitor devices with agents in real-time—instantly informing you of current issues and flagging potential problems.

- Alert Monitoring
- End User Remote Control
- Client Workstation and Server Remote Control Access
- Hardware/Software Inventory Audits
- Application Management Suite
- Reporting (Key and Custom)

### IT Process Automation

Leverage an extensive library of 1000+ pre-built scripts, policies and extensions supported by Lockett to automate frequent tasks. Custom scripting available to add additional functionality to your unique business.

- Lockett Script Library Access
- Custom Scripts by Lockett
- One Hour Monthly Review

### Patch Management

Lockett keeps your devices secure, patched, and optimized through proactive, centralized, policy-based device management delivering automation at scale.

- Microsoft Security Updates
- Optional Patches
- Licensed Third Party Software Updates

### Vulnerability Management

Lockett Vulnerability Management scans and evaluates vulnerability prone data across an organization, prioritizing security risks and providing a clear view of your company's security posture.

- Data Collection
- IT Asset Inventory, Grouping and Prioritization
- Asset Scanning
- Analysis and Reporting
- Executive Overview/Security Assessment Consultations

### Dark Web Scanning and Monitoring

Discovery and proactive monitoring of stolen and compromised credentials on the Dark Web

- Dark Web Domain Scan and Ongoing Monitoring
- Alert Notification
- 30-Day Summary

### Managed Detection and Response (MDR)

Identify hard-to-detect persistent threats that bypass traditional, preventative security controls before incidents escalate.

- Endpoint Data Collection and Inspection
- Threat Investigation
- Threat Detection Notification
- Monthly Incident and Investigations Report
