

Azure Assessment

Get Started!

\$9,500 – \$15,000
(based on # of servers
being assessed)

SMBs & Enterprise

21 days

Benefits

See Dependencies

Visually maps all your dependencies that exist between nodes and applications within your infrastructure.

Assess Security Risks

Learn how your network communicates with itself and whether outside connections might pose a security threat.

Achieve cost-efficiency

Project running costs in Azure that will match your optimal usage and needs.

Deliverables:

Review your environment

Review your existing infrastructure, operating systems and any planned changes to see if Azure is the right solution.

Run Azure Assessment

Deploy an agent that collects usage data for 14 days. The collected metadata allows us to report on system identification, performance and programs information, and network bandwidth.

Provide migration scenarios

We track maximum, minimum, and average workloads during the assessment. From these insights, we can accurately project TCO. We'll then present you with migration scenarios.
