

## Tina's Story

Tina is a 32 year-old Marketing Specialist for a media firm in Toronto, Ontario. She's married to an essential worker, and they have 2 boys under the age of nine and a dog.

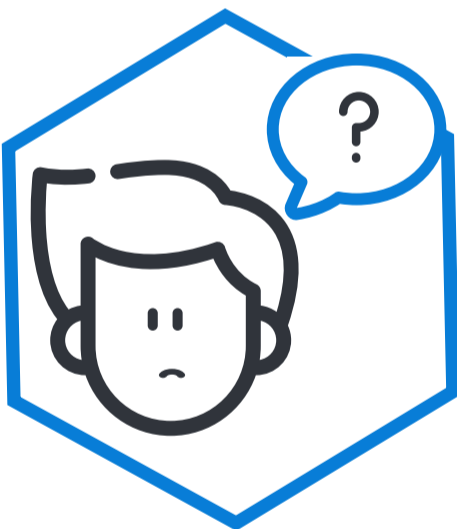

Tina has been working from home since the start of COVID-19, while also taking on the roles of caregiver, teacher, and, when necessary, referee for her two boys. After months of trying to balance work and home life as basically a single parent for 8 hours a day since COVID started, she is ready and excited to return to her office.

She and her husband have made the tough decision to send her boys back to school.

She's been telling her employer that she would like to return to the office when the option is available.

Tina's employer would like to make sure their employees can return to their office in the safest way possible.

Tina's media firm decided to implement an app that would help to track how many people were in the office. This app lets employees fill out a simple health check form that verifies they're in good health and not showing symptoms of COVID-19, and allows them to book desk space to ensure the office does not get overcrowded.

### Office Capacity Manager App

ProServeIT's budget-friendly Office Capacity Manager app (starting at \$0.75/user/month) has ensured that employees, like Tina, can return to the office in a safe manner. The easy-to-fill out form allows Tina to choose the days she'd like to work from the office, and based on her answers to the form and current office capacity limits, her request is automatically sent to her manager, who can easily approve or deny Tina's request.
