

EDIFY HUDDLE

Contact Center + Unified Communications + API
all in a single pane of glass

It's time our interactions with brands are as organic as our interactions with each other — voice, text, chat, and email in one place.

And it's time to elevate the experience employees have at work so they can give their best to customers, no matter where anyone is located.

Customer experiences don't have to be poor just because of technology limitations. Finally, there's a cloud-native platform that's changing everything — a single solution for connecting businesses with customers and employees with each other.

We built the software we wish all companies had because we are Edify, and we're customers, too.

FEATURES

- Cloud-native on a multi-cloud architecture
- Voice, email, text and chat in one pane of glass
- Unified across channels, bots, and humans
- Hammond, the Edify Huddle machine learning engine, naturally understands customers, offers self-service, and routes interactions to the right agent anywhere in an organization if and when it's time, supporting agents in their quest to focus on interactions that require a human touch
- Softphone, voicemail, extension dialing, chat, and the ability to ring anywhere, plus IP desk phone support
- Hammond can identify coaching and training opportunities
- Combine IVR, IVA, and RPA functionality with custom drag-and-drop workflows that can leverage multiple data sources with no code required
- Unified communications, contact center, APIs, and telecom network all within a single platform
- APIs add real-time communication with simple programmable voice, messaging, and phone number provisioning
- Pre-built integrations with popular CRMs like Salesforce & Zendesk
- iOS and Android mobile app accessibility
- HIPAA, PCI, and SOC1 certified
- Global availability and real-time redundancy in 37 data regions and phone number origination in over 60 countries
- Multi-cloud architecture enables our 100% SLA, the industry's highest and most inclusive SLA, backed with a 10x guarantee

Reduce attrition by leveraging ML-powered coaching & training that goes way beyond score cards.

Toggle between channels inside of a single interaction.

Get instant access to customer info.

Build custom
drag-and-drop
workflows - from
simple to complex
- with no code.

The Edify
Huddle mobile
app offers
easy access
anywhere,
anytime.

About Edify Labs, Inc.

Edify connects businesses with customers and employees with each other. The company's Business Communications as a Service (BCaaS) platform, Huddle, is the only one uniting unified communications (UC), contact center (CC) and communications platform (API) functionality in a single, cloud-native software solution that lets users move seamlessly among channels within one conversation. Edify removes all the risk of using its cloud-based solution with five free users forever, global availability, real-time redundancy, usage-based pricing, and a 100% SLA, with a 10x reimbursement for any outages.
