

Highly efficient, scalable, three-phase power protection with flexible operating modes and ECOnversion for large facilities, data centers, and business-critical applications.

From 500 kW to 1500 kW N+1
Parallel solutions up to 4000 kW
380 V / 400 V / 415 V / 440 V / 480 V

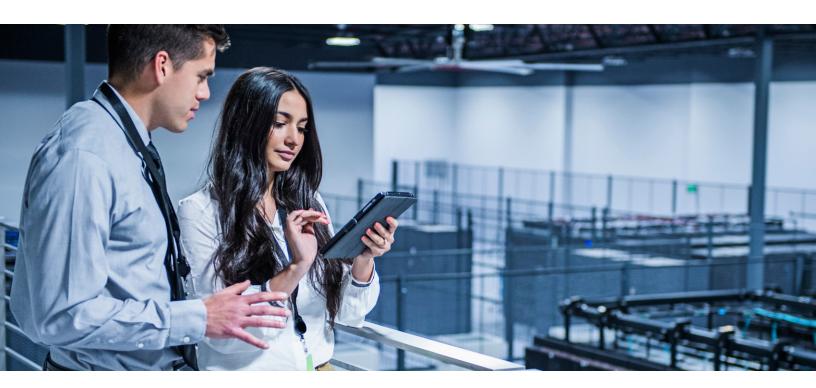

Life Is On Schneider

Scalable, flexible, highperformance power protection to meet the changing needs of your rapidly expanding business

Galaxy VX is a highly efficient, modular three-phase UPS scalable from 500 to 1500 kW in a single unit that provides high performance, scalability, and flexibility. Its scalability accommodates the changing needs of your rapidly expanding business, and its exceptional performance and abundance of cost-saving features reduce your energy costs and total cost of ownership (TCO). Galaxy VX is the ideal UPS for today's large data centers, cloud and colocation facilities, as well as mission-critical applications.

- Reduces TCO with up to 99% efficient third-party certified Class 1 ECOnversion operating mode
- Enables on-site UPS expandability with 250 kW power cabinets and the ability to parallel up to four units for capacity or redundancy
- Improves UPS reliability and lifecycle with patented four-level inverter technology
- Optimizes your return on investment, and increases your UPS and energy storage utilization, with dispatchable operation
- Speeds up your deployment time, increases on-site reliability, and reduces start-up costs with Smart Power Test (SPoT) mode
- Compatible with low TCO, high-performance Lithium-ion batteries
- Lowers maintenance and replacement costs with modular architecture

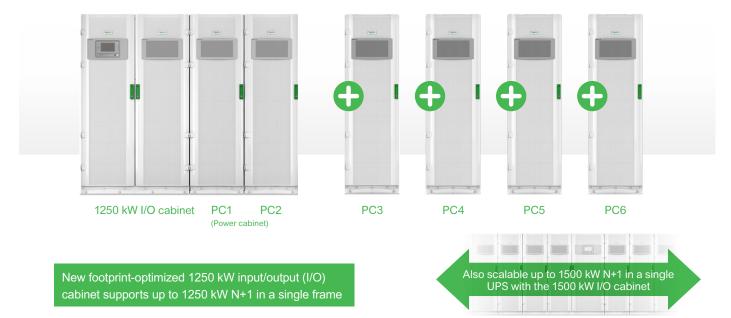

Scale up easily with modular design and high-density footprint

Modular design

The Galaxy VX system scales using 250 kW power cabinets. Power cabinets can be added after initial installation to allow for load growth or increased redundancy.

Expand Galaxy VX from 500 kW up to 1500 kW N+1

Inside the Galaxy VX redundant and scalable UPS

- Backfeed contactor
 Included in the UPS to meet local electrical codes
 and increase user safety
- 2 Redundant power supply Included in the I/O cabinet to enhance reliability
- 3 Static switch Fully rated, with front-to-back airflow
- Main controller / bypass controller redundancy If the main controller goes offline, the bypass controller will operate the UPS
- Fiber optic communication
 Fast and clear internal communication increases system reliability
- 6 Power modules in power cabinet 42 kW single phase power block is easy to replace with a low mean time to repair (MTTR)
- Replaceable fans Replace fans while the UPS is online

Best operational efficiency

Reduce your energy bill

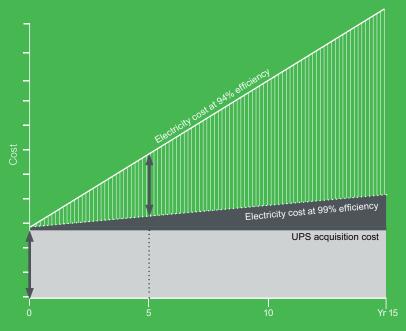

Very high efficiency for medium and large data centers and colocation facilities. By using ECOnversion mode, significant savings are achieved every year on your electricity bill.

ECOnversion: an unbeatable combination of power quality and high efficiency

Over \$350,000 in utility and cooling savings per 1 MW load for 10 years of operation

Typically after 3-5 years*, electricity savings = UPS acquisition cost

*15 year Galaxy VX Savings in ECOnversion (USD) 2 MW UPS @ 50% load (\$0.10/kWh)

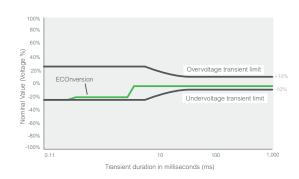

ECOnversion mode

Enjoy the highest energy savings available today without sacrificing load protection – our patented zero-break transfer design offers peace of mind:

- World-class efficiency up to 99%
- Excellent load protection with certified third-party Class 1 performance per IEC 62040-3
- Zero transfer time to continuously-charged batteries or double conversion mode; inverter is always ON and active
- Compliant with IEC 62040-3 Class 1 output performance of UPS standard
- Generator friendly, with no harmonics and input power factor correction
- Programmable scheduling available

How does ECOnversion mode work?

- Bypass input powers the load
- Active inverter supplies power factor correction and harmonic compensation
- Batteries charge continuously
- Patented bypass silicon controlled rectifier (SCR) control prevents input short circuit from affecting critical loads

Galaxy VX ECOnversion meets Class 1 of IEC 62040-3: zero-break transfer during power outage.

 Selectable input voltage, frequency, and total harmonic distortion (THDU) windows ensure the UPS operating mode is optimized for site-specific power conditions

Calculate your efficiency savings using the Three Phase UPS Efficiency Comparison Calculator: schneider-electric.com/upsefficiencycalculator

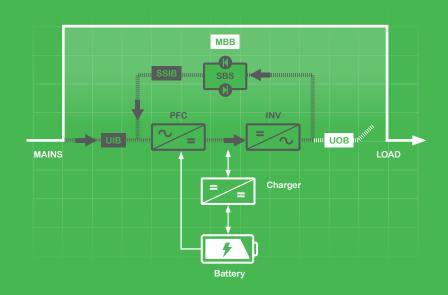

Increase reliability, predictability, and performance with advanced Galaxy VX technology

Speed up deployment time, reduce start-up costs, and increase onsite reliability of the UPS operation by using the Smart Power Test (SPoT) mode before connecting your critical load.

SPoT (Smart Power Test)

SPoT enables the field service engineer (FSE) to test the UPS with full capacity current flow through important components and converters, without using a large system input current and without needing a load bank connected to the system or other system modifications.

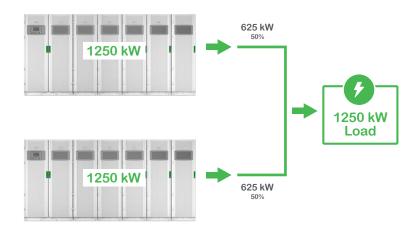

- Simple, easy, and safe method to test the UPS at full power
- Can be conducted after service, repair, upgrade, or commissioning of UPS installation to verify system is properly installed
- Reduce risk to load and improve product quality
- · Significant cost, time, and power savings!

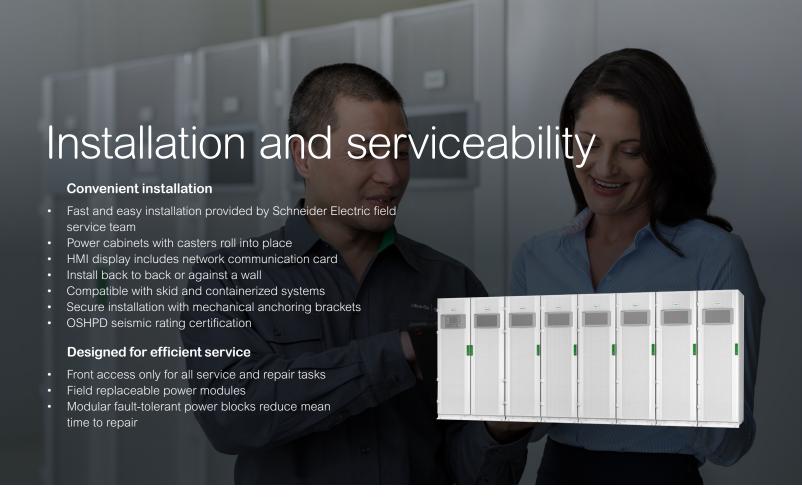

Increase reliability and peace of mind by adding a power module cabinet to achieve N+1 redundancy, or by paralleling up to four UPSs for capacity or redundancy.

Smart paralleling and fault-tolerant design

Galaxy VX inherently redundant design allows for any power cabinet to act as a redundant 250 kW block. Load sharing in parallel is done by matching the percentage output of each system depending on capacity availability. Redundant parallel communication cables increase overall system resiliency.

Flexible, optimized, long-life energy storage with Lithium-ion

Galaxy VX seamlessly integrates with the Schneider Electric Lithium-ion energy solution, and directly powers the continuous battery monitoring that delivers improved predictability and manageability.

Benefits of Lithium-ion vs. Lead-acid batteries

50-75% less

footprint. Reduce the secure power footprint so revenue-generating equipment can take its place.

60-70% lighter

weight. Provides flexibility to install on any floor while minimizing structural modification requirements.

30-50% lower

total cost of ownership (TCO). This includes lower cooling costs, upfront capital cost, and other operating expenses.

5x faster

recharge. Full recharge in less than 2 hours.

To learn more about Lithium-ion battery solutions, visit: www.se.com/li-ion

2x-3x longer

expected life. Reduces the burden and cost of battery replacements. Reduces risks of downtime or load interruption during maintenance.

higher

temperature range. Can operate at hotter temperatures while outlasting VRLA.

Dispatchable UPS

Unlock the value of your UPS: Maximize savings, generate revenue, and improve resiliency by dispatching stored battery capacity.

Lithium-ion batteries are increasingly being utilized to provide a variety of valuable grid services and generate steady income streams. With modern data centers leveraging Lithium-ion battery technology, such income streams are also available to data center owners. This added functionality enables quick return on investment while increasing system reliability and providing continuous state of health data.

· Reduce utility demand charges

- Offset peak-load demand by dispatching excess capacity from Lithium-ion batteries

· Minimize time-of-use tariff charges

 Reduce energy consumption during peak hours by load shifting to non-peak hours

Increase system reliability

- Improves overall performance by cycling batteries to validate their state of health

Generate new revenue streams

 Create additional revenue by participating in utility programs and electricity markets

To learn more about dispatchable UPS solutions, contact your Schneider Electric sales representative.

Did you know? Demand charges can make up to 50% of your monthly electric bill Demand Charge Reduction - Monthly \$50 \$40 **Thousands** \$30 \$20 \$10 \$0 Aug Sep Oct Nov Mar Apr May Jun Jul ■ Before ■ After

Dispatchable UPS system components

Galaxy VX UPS

- Modular and scalable power solutions for maximum flexibility and reliability
- Ultra-high efficiency and multiple operation modes to reduce energy consumption
- Load protection and peace of mind even when dispatch functions are performed

Lithium-ion batteries

- High cycling capability, increased reliability, and longer life vs lead-acid batteries
- High energy density allows for smaller footprint, translating to space savings
- Improved predictability and manageability via continuous battery monitoring
- Reduced total cost of ownership (TCO) and simplified maintenance

EcoStruxure Microgrid Advisor

- Advanced model predictive control algorithms autonomously enable maximum energy savings while optimizing battery life
- Stay informed of energy usage, savings, and battery reserve via EMA app and Web site
- System reliability via 24-hour advanced automatic default operation schedules
- Cyber-secure platform to protect site and related data from external hacks.
- To learn more about EMA, visit: www.se.com/ema

Visibility and peace of mind

Manage and monitor your Galaxy VX from anywhere, at any time, on any device, thanks to EcoStruxure IT software and services.

EcoStruxure leverages advancements in IoT, mobility, sensing, cloud, analytics, and cybersecurity to deliver innovation at every level. EcoStruxure IT Expert and EcoStruxure Asset Advisor are cloud-based solutions that provide you with enhanced visibility and data-driven insights to optimize data center resiliency and performance.

When it comes to IT critical equipment monitoring, are you more hands-on or hands-off?

Visibility anywhere, anytime

EcoStruxure IT Expert provides you a hands-on approach with secure, cloudbased monitoring software that synthesizes performance and alert data into proactive recommendations and enables secure, wherever-you-go visibility from any device. Try it for free for 30 days:

ecostruxureit.com/ecostruxure-it-expert/#trial

24x7 remote monitoring and troubleshooting

EcoStruxure Asset Advisor* for secure power and cooling provides you a handsoff approach with 24x7 remote monitoring service by the Schneider Electric service bureau engineers. We monitor and troubleshoot, you relax.

* Contact your local representative for availability.

Comprehensive on-site services

Provides optimal system lifetime

Start-up service:

 Commission the installation in accordance with manufacturer's recommendations. Ensure optimal system performance from Day 1.

Schneider Electric-certified installation services

 Expert configuration of your equipment for optimal performance and reliability.

Maintenance services

- Ensure proper care of your mission-critical applications.
- Preventive maintenance and response time upgrades, where available.

Flexible service plans / on-site extended warranty

- Hassle-free system maintenance.
- Improve uptime at a predictable cost.

Technical specifications

| Galaxy VX Technical Specs | 500 kW to 1500 kW UPS |
|--|--|
| Topology | On-line double conversion with ECOnversion mode |
| Nominal Power (kVA) | 500 - 1250 kW (1250 kW input/output cabinet) 500 - 1500 kW (1500 kW input/output cabinet) |
| Technical Power Ratings | 500 kW, 625 kW, 750 kW, 800kW, 1000 kW, 1100 kW, 1250 kW, 1500 kW |
| Parallel capability | Up to 4 units (N+1) |
| Input | |
| Rectifier Type | IGBT active rectifier |
| Nominal Input Voltage | 380V / 400V / 415V / 440V / 480V, 3-wire (3PH + PE) or 4-wire (3PH + PE + N) (600V with optional external transformer) |
| Input Voltage Range | +20% / -15% |
| Input Connection | Single or dual feed |
| Input Frequency | 50 or 60 Hz nominal (40-70 Hz) |
| Input Current Total Harmonic Distortion (THDI) | < 3% @ 100% load |
| Input Power Factor | > 0.99 |
| Walk-in | 0 to 300s (configurable) |
| Short Circuit Withstand Rating | 100 kA |
| Output | |
| Inverter Type | 4 Level IGBT, high efficiency, transformerless |
| Nominal Output Voltages | 380V / 400V / 415V / 440V / 480V, 3-wire (3PH + PE) or 4-wire (3PH + PE + N) (600V with optional external transformer) |
| Load Power Factor | 0.7 leading to 0.5 lagging without UPS derating |
| Voltage Regulation | +/- 1% |
| Frequency Regulation | 50/60Hz +/- 0.1% (free running) |
| Overload in Normal Operation (at 40°C) | Continuous up to 110% 10 minutes up to 125% 1 minute up to 150% |
| Overload in Bypass Operation (at 40°C) | Continuous up to 110% (380V / 400V / 415V / 440V) Continuous up to 125% (480V) 1 minute up to 150% (all voltages) |
| Output Voltage Distortion (THDU) | <2% at 100% linear load; <3% at 100% nonlinear load |
| Output Power Factor | 1.0 kVA = kW |
| Efficiency Details | |
| Double Conversion mode | Up to 96.5% |
| ECOnversion mode | Up to 99% |
| Energy Storage Parameters | |
| Туре | Li-Ion, VRLA, Wet Cell, Flywheel |
| Nominal DC Bus Voltage | 480 VDC |
| Common battery string | Yes (VRLA only) |
| Communication | |
| Multilingual Graphics LCD Display | Yes |
| Compatibility with APC Communication cards | AP9630 |
| Communication Details | Modbus TCP/IP, SNMP, Email Modbus RS-485 (optional) |

About Schneider Electric At Schneider Electric, we believe access to energy and digital is a basic human right. We empower all to make the most of their energy and resources, ensuring Life Is On everywhere, for everyone, at every moment. We provide energy and automation digital solutions for efficiency and sustainability. We combine world-leading energy technologies, real-time automation, software and services into integrated solutions for Homes, Buildings, Data Centers, Infrastructure and Industries. We are committed to unleash the infinite possibilities of an open, global, innovative community that is passionate about our Meaningful Purpose, Inclusive and Empowered values. www.se.com
