

BA-Series Insulated Battery Toolkits

Common Applications: Battery Installation, Battery Maintenance, UPS, Telecom, Electrical

BA-Tools-MTK Kit (Maintenance Toolkit - 30 PCS)

Product Description

Insulated tools are designed to safeguard personnel and equipment that is susceptible to shorting out and creating spiking surges to electrical apparatuses. The Eagle Eye **insulated tools are** offered in six different kits for a variety of applications from battery and UPS maintenance, to telecommunications and general electrical work. Due to OSHA 1910.331 standards, insulated tools have begun to emerge to satisfy electrical safety related work practices. Laws have been implemented by OSHA enforcing mandatory compliance with standards that will reduce the number of electrical accidents related to unsafe work practices by field technicians.

All insulated tools in the BA-Series are rated for exposure of up to 1000VAC and di-electrically tested at 10,000VAC. Each toolkit meets or exceeds ASTM F1505-01 and IEC 900 Standards for Insulated Hand Tools as well as compliance for OSHA 1910.333 (c)(2), and NFPA 70E 2012. Individual tools are made with two-color insulating material that is impact resistant and flame retardant. For ease of inspection and added safety each tool has a yellow under layer that identifies when the tool should be replaced and removed from service.

Product Advantages

- Six (6) different toolkits to meet a variety of applications
- Custom toolkits available upon request
- Meets ASTM F1505-01 and IEC 900 Standards for Insulated Hand Tools
- OSHA 1910.333 (c)(2), and NFPA 70E 2012 compliance
- Made with two-color insulating material - yellow underlayer for ease of inspection
- Impact resistance and flame retardent insulation
