

Kontakt.io Cloud

Kontakt.io Location Services

Enabling location services and condition monitoring via hyper-contextual, real-time sensor data and location data streams

Consume presence, best-gateway and XY-based location to make your own application location aware.

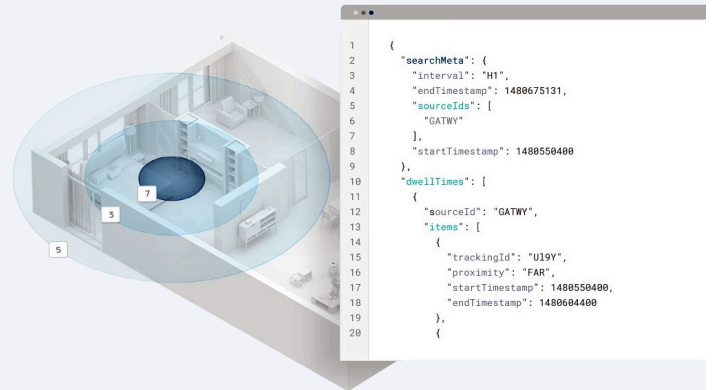

Launch faster by building your asset or people tracking solution upon Kontakt.io's scalable Webhooks or RESTful API.

Consume telemetry packets and AI-event streams from the device including custom-based rules.

Location Engine & Streams

Providing real-time information about location of detected devices within the range receivers.

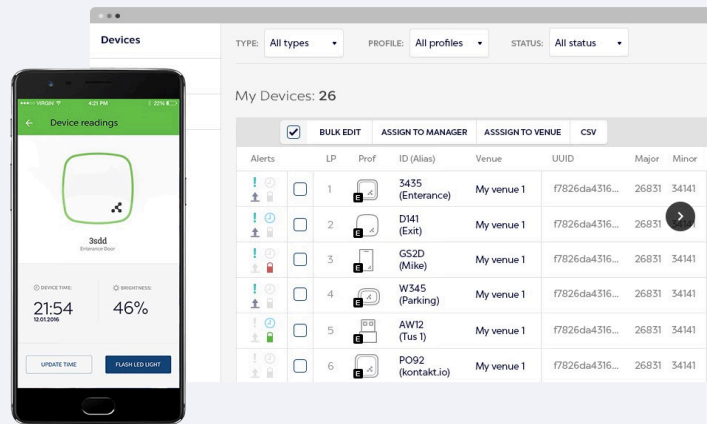

- Retrieve processed location streams from Kontakt.io and third party gateways including
 - Raw presence streams per gateway
 - Best-Gateway-processed location data
 - XY-Coordinates
- Select the modification of the location engine set-up including time aggregation intervals
- Allow modification of the location streams and engines per location / facility / floor including ceiling height, deployment height of the gateway, material of the walls and the floors.

Condition Monitoring & Telemetry Streams

Providing real-time information about the health and sensor data of your devices.

- Retrieve raw telemetry data from the gateways including from Kontakt.io Telemetry Packet
- Retrieve firmware/device processed telemetry data from the device as form of an event stream
- Allow to create simple firmware rules on what events should exist and when they should be triggered by e.g. writing thresholds to temperature or the gyroscope.

About Kontakt.io

Kontakt.io is a leader in location IoT. Our mission is to simplify the delivery of location and sensor data insights. We create the data foundation that drastically improves and automates decision making in resource planning, operations, and customer experience workflows.

Kontakt.io's portfolio of complete IoT and location solutions combine hardware, software, and cloud to bring real-time visibility, analytics, and AI to operations. Today, we serve over 2,000 customers across diverse sizes and industries, from transportation and logistics to manufacturing, healthcare, airports, governments and public spaces. They use Kontakt.io to reduce emergency incident time, decrease asset search-times, introduce activity-based-costing, automate manual processes, digitize physical order traceability or prevent machine downtimes.
