

Reducing Calf Mortality Rates

with REDMOND

It is extremely difficult losing calves after investing so many resources into your herd's fertility health. High calf mortality rates can take years to recover from; and production during those years can be lean after losing members of your future herd. Thankfully, the farming experts at Redmond are always looking for more ways to help you get back to what you love about raising animals.

Introducing...Redmond First Month Calf Direct Fed Microbial (DFM)!

What Can Redmond First Month Calf DFM Do?

Redmond First Month Calf DFM is a highly effective, calf fluid additive therapy containing:

Redmond Mineral Conditioner

Volcanic smectite clay with electrolytes and 60+ trace minerals naturally found at the Redmond mineral deposit

Probiotics

Carefully selected bacillus subtilis strains for balanced gut microbiota

Mannan-oligosaccharides (MOS)

Yeast cell wall derivatives that prevent pathogen colonization and feed probiotic colonies

Treat Scours/Dehydration

Scours attacks your calves in 3 ways:

1. Metabolic acidosis: a buildup of acids in bodily fluids
2. Dehydration: harmful loss of bodily fluids
3. Loss of energy/nutrition input: loss of essential electrolytes and other nutrients needed to sustain life

Redmond First Month naturally treats scours:

- Alkaline mineral conditioner to buffer acidosis and balance pH levels
- Replenishes lost electrolytes/salts (which provide the tiny electrical impulses needed to power their muscles, nerves, and heart)
- Smectite clays slow the rate that fluids and nutrients pass through the calf's body, helping proper absorption
- Replaces microbe strains needed for proper digestion

Boost Immune Health

Newborn calves are highly susceptible to a wide range of viruses, bacteria, and other harmful pathogens. Their digestive tract is extremely porous in early life and these invaders can easily enter their bloodstream.

Redmond First Month guards immune health:

- Redmond conditioner has natural anti-microbial properties and inhibits pathogen growth without damaging beneficial bacteria.
- MOS prevents harmful pathogens from attaching and colonizing in the intestines.
- A study conducted by UC Davis, found that the smectite clay in Redmond calf DFM increased immunoglobulin and mineral levels in the blood.

Restore Normal Gut Function

Simply treating scours symptoms is not enough; proper gut function needs to be restored in order for the calf to grow and increase in weight.

Redmond First Month restores digestive function:

- Clay conditioner protects the gut and guards the digestive lining, slows digestion passage rate, and binds to harmful toxins so they can be excreted instead of absorbed
- Probiotic supplements replace and grow healthy gut microbes that are stripped and killed off by scours.
- As a yeast derivative, MOS feeds new colonies of beneficial microflora

Reduce Calf Mortality Rates

The UC Davis study also found that the smectite clay in Redmond First Month cut calf mortality rates by more than half, compared to the control group.

- Smectite Group: 3 mortality cases
- Control Group: 8 mortality cases

What Customers Are Saying

"I expected the down calf to be dead in the morning. I gave this bull calf one dose with Redmond First Month DFM in the milk bottle. The next morning it was standing and hungry and ready for its milk." - Donald R. Athens, WI

"I had been losing almost every calf within 3 days of life. My Redmond rep got me a small pouch of Redmond First Month DFM. I started feeding it in the colostrum. My next 2 heifer calves are doing great. I will not raise calves without this product." - Leader Win Farm, Lancaster, PA

Let Redmond restore your peace of mind and help save the health of your next generation of calves.
