Home-based agent hardware setup

CONFIDENTIAL Rev T1.1

Some items may look different, but your kit will contain:

Computer

Monitor

Headset

2 Power Cords

Monitor Cable

Ethernet Cable

Keyboard

Mouse

Hardware Physical Placement

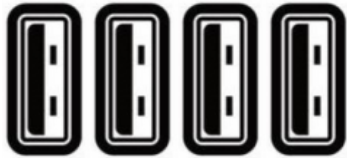

Important

Computer must be placed within connecting distance of both your power source and router.

Step One: Look on the back of your computer to identify these ports

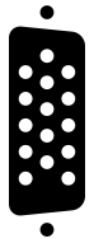

AC power port

USB ports (look near this icon )

Ethernet cable port (look near this icon )

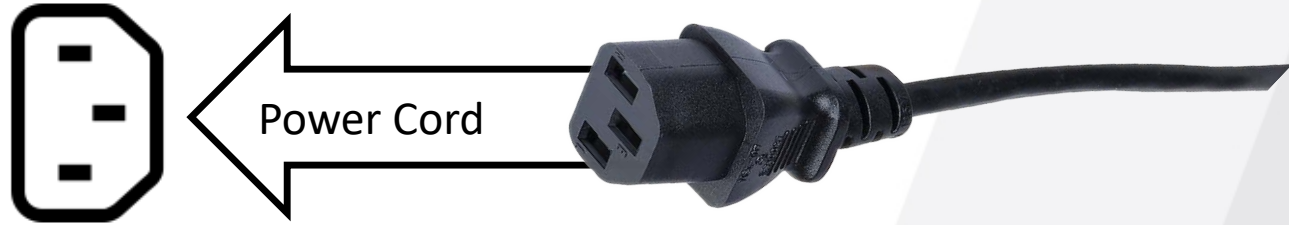

VGA monitor cord port (look near this icon )

DisplayPort (for use with some two-monitor setups)

Step Two: Connect power

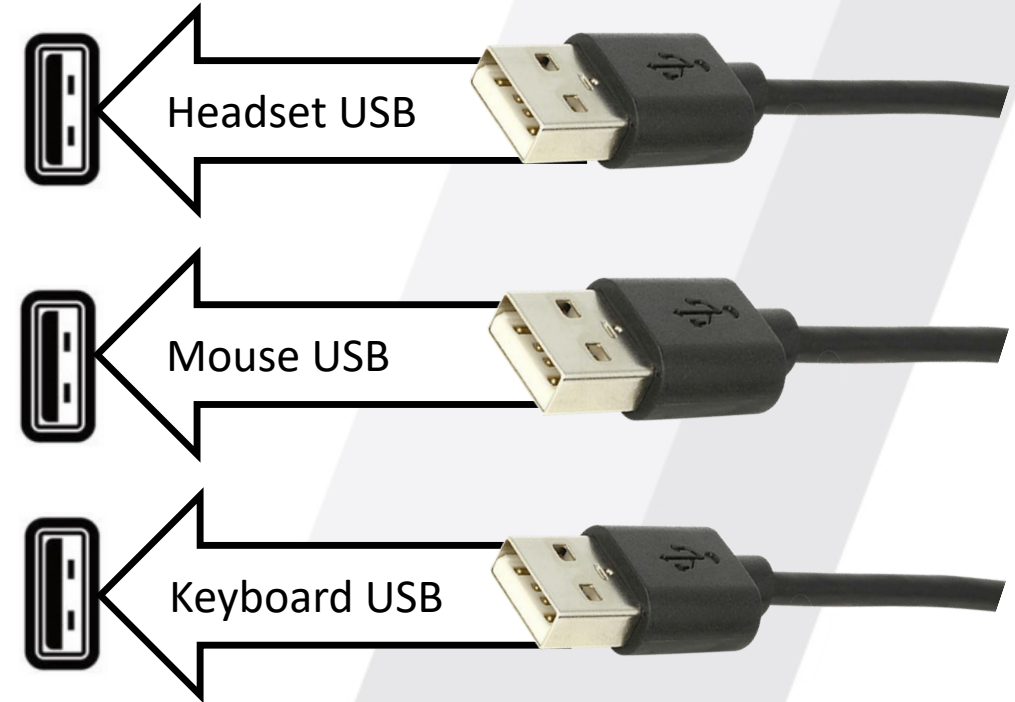

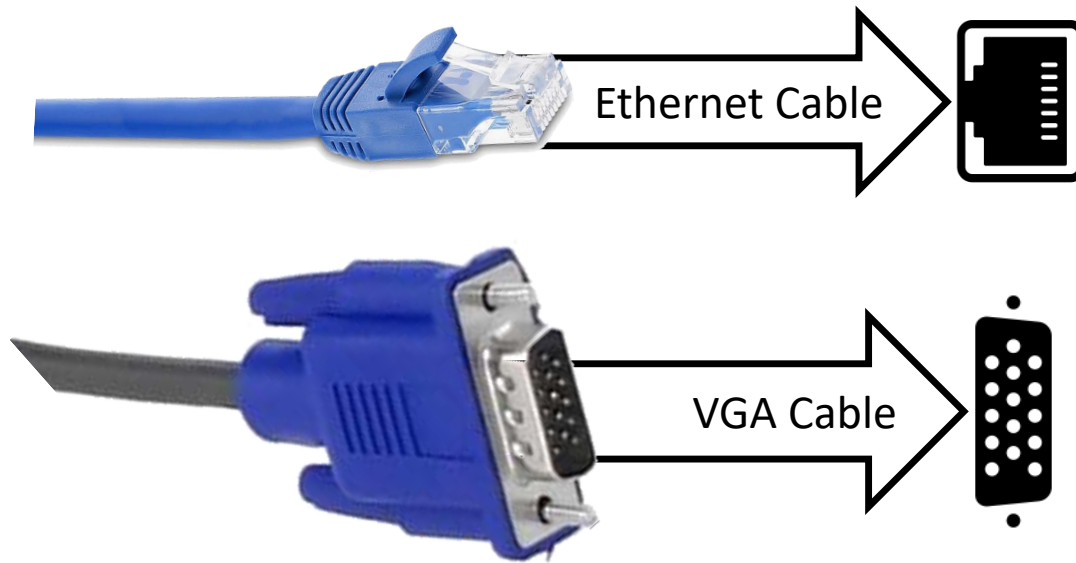

1. Connect power cable to computer power port.

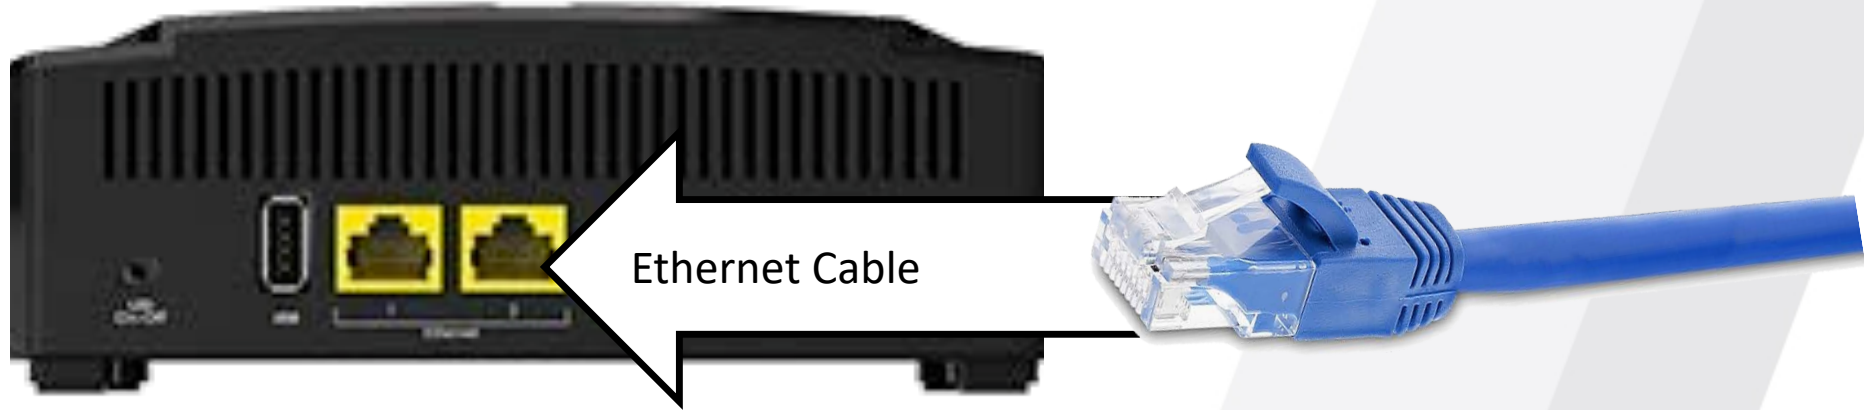

2. Connect power cable to power outlet.

Step Three: Connect remaining cables to computer

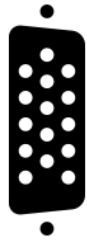

Step Three: Connect ethernet cable to router

Step Five: Look under the monitor to identify these ports

VGA monitor cord port

AC power port

Step Six: Connect cables to monitor ports

Important

To add your own second monitor to your load-out, follow the manufacturer's connection instructions now.

Note: Second monitor connections may be different from what is displayed above.

Otherwise, proceed to the next step.

Step Seven: Connect headset to USB adapter, if your headset includes one

Step Eight: Turn on monitor and computer

Step Nine: Login to Windows

Login using the username and password included in the email recently sent to you.
