

IS YOUR BUSINESS READY FOR

Wi-Fi 6?

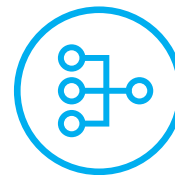

Wi-Fi 6 has the potential to truly transform your business.

Wi-Fi 6 is coming soon. Do you know what this new technology entails, and how it can benefit your business? To answer these questions, let's walk through the state of network connectivity in the business world today, then discuss how you can make strategic improvements moving forward.

Understanding the problem

There are many pain points in the process of ensuring network connectivity. One is the sheer volume of traffic you're dealing with – it's estimated that by 2022, there will be 12.3 billion mobile connections in the world, nearly two per person. More than likely, the network at your place of business is quickly becoming overloaded with traffic from people's mobile devices – and if your coverage for those devices is at all spotty, it's causing reduced employee productivity and lost revenue. There are other issues as well, including security, compliance, and prolonged downtime.

Network traffic increasing rapidly

Exploring the benefits

When Wi-Fi 6 is rolled out later this year, it should have immediate benefits. When implemented right, it can help your business drive more value from your IT infrastructure. Your people can expect better connection speeds, greater bandwidth, longer device battery life, and a host of other positive effects that should drive real business value.

Wi-Fi 6 is a viable solution

But are you ready?

Wi-Fi 6 has the potential to truly transform your business. But to fully realize that potential, you've got to make sure your business has a Wi-Fi 6-ready infrastructure in place. This means checking that your hardware is capable of handling a more robust network standard.

Is your organization prepared?

Why you should work with us

The best way to get your network ready is to work with the expert team of Cisco and Zones. With Cisco, you can tap into a broad portfolio of different wireless access points that can be tailored to meet any organization's needs, regardless of specific features needed or desired price point. Add in Cisco DNA Assurance, and you'll have peace of mind through the entire process, as the solution makes it easy to manage your network, devices, and apps.

As for Zones, we can deliver the service you need to get your Wi-Fi 6-ready network up and running. We have a proven track record of designing, implementing, and managing Wi-Fi networking solutions for a wide range of clients around the world. Because we have a strategic relationship with Cisco, as well as many other leading OEMs, we can use our industry connections to tailor the perfect solution to meet your needs, every single time. If your business isn't prepared for Wi-Fi 6 yet, we can make sure that it will be soon.

Gearing up for Wi-Fi 6? Contact your Zones Account Manager today, and we can start an assessment of your network and draw up a solution to get you ready.
