ACT ON YOUR DATA 2

Deliver immediate business value through search, workflow, analysis, remediation and other capabilities, driven by an easy experience that people like using

Remediation Pack   Single-View Pack

'Add-ons'

exonar REVEAL

1 DISCOVER YOUR DATA

The worlds leading data discovery software, offering coverage, scale and depth of discovery. Easy to deploy and manage, it's the enabler that allows every organisation to know their data.

1 | Exonar Release Update – 4.3.0 |
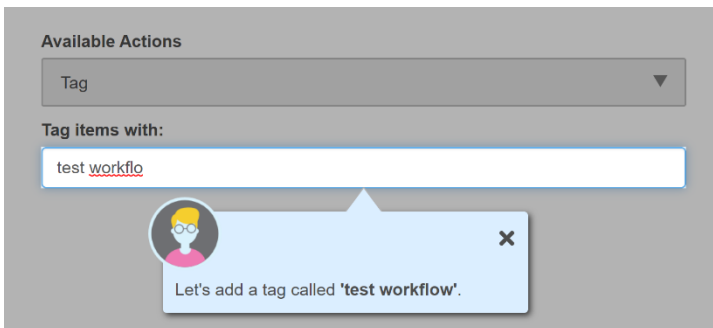

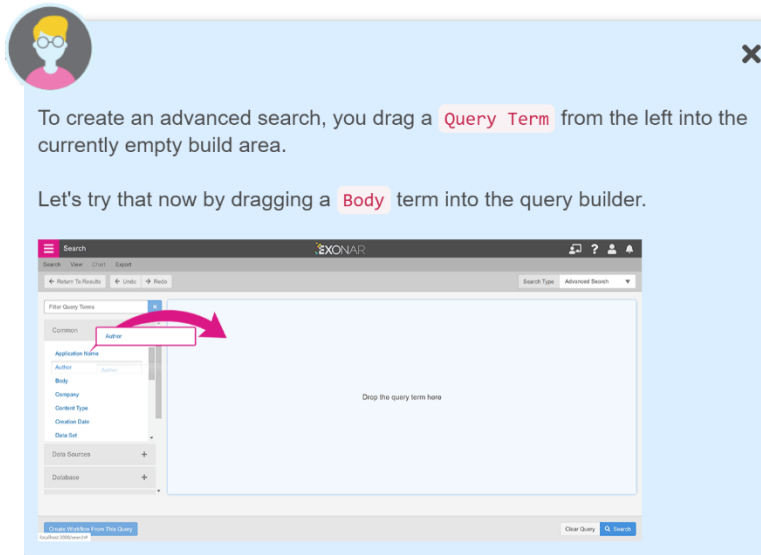

NEW FEATURES IN 4.3.0

This release focusses on improving the customer experience when using our product. Users can now explore and use the Exonar Reveal platform with greater confidence, as we guide you through the different features in our new interactive tutorials.

1	RF-1016 Dynamic Tutorials

NEW FEATURE

Upon upgrading to 4.3.0, new and existing users will be presented with an interactive guided tutorial for each page they navigate to. These tutorials can be stopped at any time by closing the window and can be started at any time by clicking on the new menu bar in the top right-hand size of the platform.

Tutorials provide step by step instructions on each page.

To create an advanced search, you drag a `Query Term` from the left into the currently empty build area.

Let's try that now by dragging a `Body` term into the query builder.

Practice setting up workflows and using other product features.

Available Actions

Tag

Tag items with:

test workflo

Let's add a tag called **'test workflow'**.

NEW FEATURES IN 4.3.0 CONTINUED...

We've also improved our home page experience, providing users with quicker access and oversight to the data which matters most to power and protect their organisation.

2	RF-1026 Improved Home Page Experience	NEW FEATURE

When logging on to the platform, users will now see a high-level overview of their activities within the platform. This includes the number of items identified as containing potentially personal information, as well as high, medium, and low risk information.

It is also quicker and easier to access the key platform features thanks to our improved home page layout organised by activity areas (find, visualise, automate).
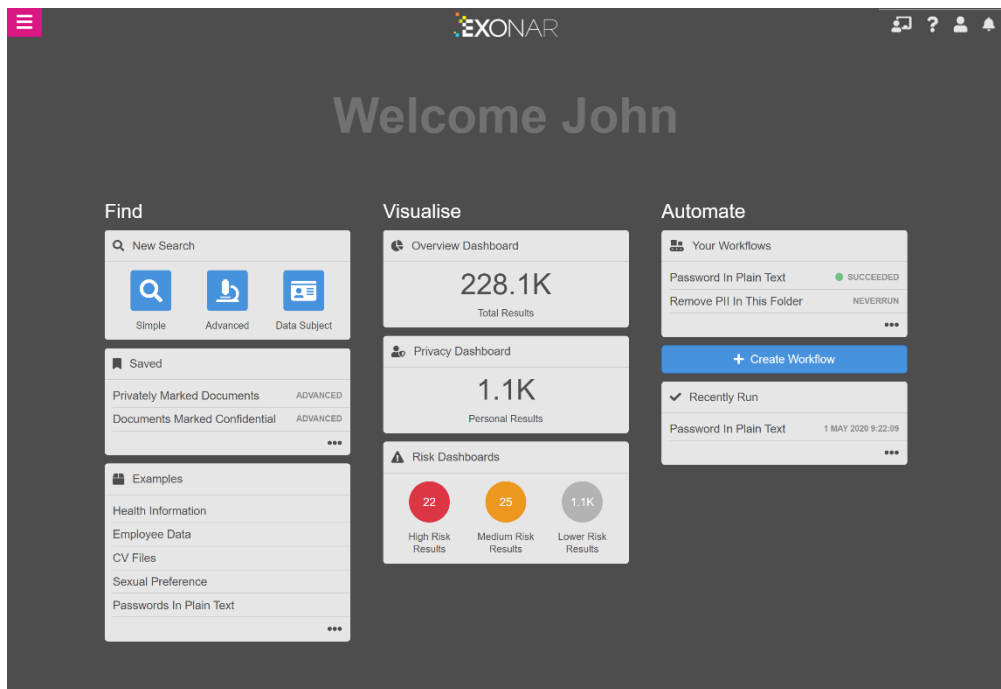

3	RF-1102 MySQL Connector	NEW FEATURE

You can now discover data that is stored within whole schemas/databases and specific tables in MySQL with the introduction of our new MySQL connector.

OTHER ENHANCEMENTS IN 4.3.0

As well as adding new features in this release, we've made a couple of minor visual enhancements to the product.
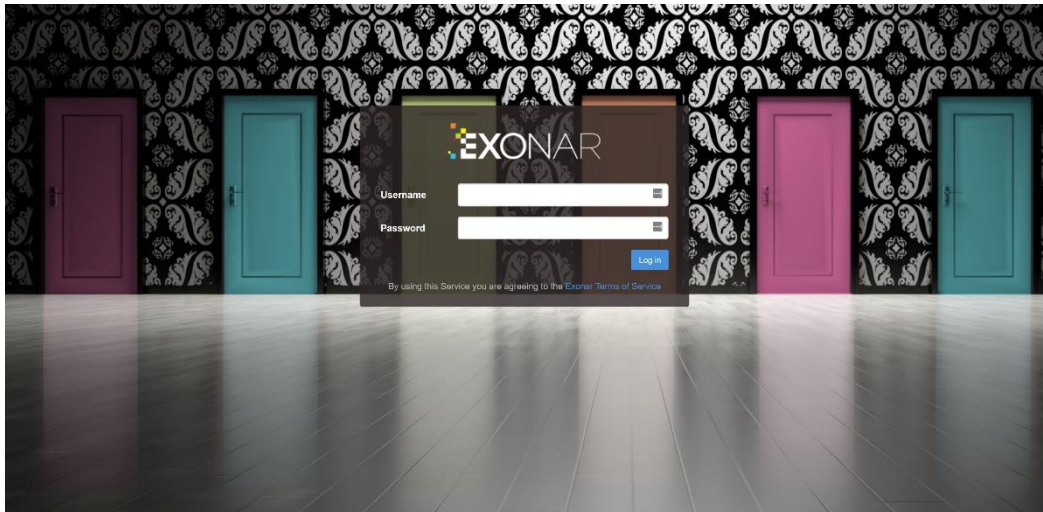

1	The chart within the Risk Dashboard previously titled "Results by Modified Date" has now been changed to more accurately reflect the content that this chart displays.
2	The login page image has been changed to freshen up the experience and better visually align with Exonar's current branding. Which door would you choose?

BUG FIXES IN 4.3.0

A software release isn't complete without fixing a few issues along the way...

1	A bug which allowed users to click and drill down on elements of the graphs in the Risk Dashboard before the graph had fully loaded and displayed has been fixed.

KNOWN ISSUES IN 4.3.0

We continue to track known issues in this release which we are working on and will fix as soon as possible in a future release.

1	When using Firefox, the text in the Single Sign On login page displays incorrectly outside of the button. This is due to Firefox not being a fully supported browser.
2	If a new data source is added while a related data source is ingesting data, it is possible that a few items may be omitted from the index by the active data source.
3	The product is unable to connect to MySQL server with "Force SSL" settings enabled.

SUBMIT YOUR FEATURE IDEAS!

Have your say and tell us how we can enhance our data discovery strategy.

Welcoming all brilliant feature development ideas

Please share your ideas with us on exo.nr/ideas or get in touch with your contact at Exonar. Even if it is already on our list, we'd love to hear from you.

Product feature long list
We log and prioritise all viable ideas from our customers and employees into a feature longlist.

Product feature short list
We progress top scoring ideas into a feature shortlist. These features are considered in detail for the development pipeline.

Roadmap
We publish the committed features into our roadmap, with an estimated timescale for development.

Evaluation against our three product strategies:

| Discover Your Data |
| Act on Your Data |
| Extend Capability |

Roadmap Update

We will share our planned product roadmap with customers seasonally and in the Spring and Autumn of each year, you are welcome to join our Customer Forum.

WHAT NEXT?

PLAN YOUR UPGRADE!

We always recommend that you keep your Exonar Reveal implementation as up-to-date as possible, so you can benefit from the latest features and enhancements.

If you want more detailed release dates, need help planning your upgrades, or to get hold of the software itself, please don't hesitate to follow up with any of the following actions:

- Contact Exonar Head of Customer Success Gareth Tranter,
- Send an email to support@exonar.com.
- Download the latest version from Azure Marketplace

CHECK OUT OUR WEBINARS & REPORTS

We run regular webinars and live demos of the latest features, specifically targeted at different roles within organisations. We also publish reports on the business issues facing organisations like yours.

- For links to our webinars click here: https://exonar.com/webinars
- To listen to our podcasts click here: https://exonar.com/podcasts
