IRONSCALES

THE TOOL THAT KICKS HACKERS OUT OF YOUR INBOX

The Challenge
Email inboxes are your company's front door. And hackers are finding new and creative ways to walk right in. You need a solution that can protect your system when your staff can't.

The Solution
IRONSCALES can:

- Protect Against Spoofing, Ransomware and Phishing Attacks
- Quickly Identify and Quarantine Threats
- Allow Suspicious Links to be Opened Safely in the Cloud
- Offer Regular Security Class Training Modules for Your Staff
- Stretch Your Budget with Scalable Solutions for your Small Business
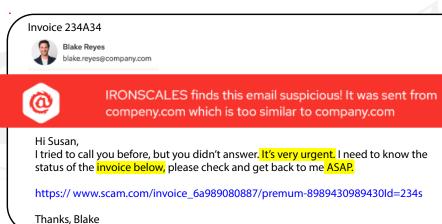

What's the most popular tool in a hacker's toolbox? Sending malware and ransomware straight to your employee's inboxes in the form of spam, spoofing, and spearfishing attacks. Don't let them. Integris is proud to offer our clients IRONSCALES, one of the industry's top anti-hacking platforms to keep our customers safe, around the clock. With IBM estimating the cost of a single hack to $3.92 million, can you afford not to protect your data?

How Does IRONSCALES Protect You?
IRONSCALES is the cloud-native, API-based email security platform that is continuously learning, detecting, and remediating every threat that reaches your email inbox, both before and after delivery. Suspicious emails are quarantined. But the links in those emails are quarantined too, sent to a safe spot on a separate cloud server. If an employee clicks its bad link, no worries. The link isn't connected to your system.

IRONSCALES Alerts Keep Your Staff Safe

Invoice 234A34

Blake Reyes
blake.reyes@company.com

IRONSCALES finds this email suspicious! It was sent from compeny.com which is too similar to company.com

Hi Susan,
I tried to call you before, but you didn't answer. It's very urgent. I need to know the status of the invoice below, please check and get back to me ASAP.

https:// www.scam.com/invoice_6a989080887/premum-8989430989430Id=234s

Thanks, Blake
