The Integris Suite of Backup and Recovery Solutions
# Your Best Defense Against Data Loss

If the worst happens—a cyber attack, a natural disaster, or a critical data loss—how quickly could your business recover? With the right combination of data backup products, Integris can help your network get up and running again fast. Our data backup and recovery solutions protect your devices, your software, your files, and your operating systems, all for one scalable, monthly fee. Depending on your risk tolerance, we have solutions that can backup in near real time, several times a day, or once a day. Your recovery speed can be tailored to your business needs as well. It all depends upon your budget and needs. *Let us help you choose the right backup solution for your business.*

Backup Solutions
Backup Protection You Can Count On

Business Continuity and Disaster Recovery Overview

❶ **Onsite and offsite Server Backup with Business Continuity and Disaster Recovery (BCDR)**

A powerful tool for disaster recovery, our comprehensive disaster backup creates a ransomware resistant recovery system for all your data. Using inverse chain technology, this product provides a string of system snapshots that pull backups from any point in time—either a single document, or an entire reboot. Its integrated ransomware scans provide an extra layer of protection, as it detects possible ransomware infections as backups are being stored. This is our most robust backup solution and is appropriate for organizations that want to minimize data loss and downtime.

❷ **Offsite Server Backup**

Scaled specifically for more budget conscious small and medium-sized businesses, this system gives you the peace of mind that all your data stored on your server(s) are also backed up in the cloud.

❸ **Microsoft 365 Backup**

This solution offers comprehensive backup and recovery for critical business data that lives in Microsoft 365 and Google Workspace applications, including OneDrive, SharePoint, Teams, Gmail, Google Drive, and more.

❹ **Azure Cloud Backup**

Workloads running in Azure are not automatically backed up. Our Azure continuity system is designed to fill that gap, providing secure, hourly Azure backups to the cloud. The system is seamless, so you'll have true business continuity in the event of natural disaster, ransomware attacks and outages.

❺ **Cloud Backup for Workstations**

What do you do when a company laptop/workstation is stolen, broken, or infected with malware? This solution comes to the rescue with complete cloud back up with snapshot protection. The solution can restore single files or an entire device's backup without any extra equipment required.
