Microsoft Windows 365 Cloud PC

Integris.

Your Company's Last Mile to the Cloud

Microsoft's new **Windows 365 Cloud PC platform** moves your operating system to the cloud—software, files and all.

What does that mean to your organization? It means employees can access your system with one universal log in, no matter what device they're using, or where they're located. Holding a video conference in a coffeeshop? No problem. Logging into SharePoint documents from a mobile phone? Just sign in. With Cloud PC, your staff will get the same experience they have on their work-issued laptop, right down to the screensaver. Welcome to a networking future that's seamless, secure, and scalable for any size business.

The Streaming Revolution that Benefits Your Bottom Line

With the central administration Cloud PC offers, you can unleash savings and productivity gains you'd never dreamed possible. Now you can:

- Keep your hardware 30 percent longer, now that your operating system is in the cloud.

- Never worry about another software update. It's all done for you, automatically.

- Scale your storage, software licenses and security by number of users

- Pay one predictable monthly fee

The Challenge

With more people working remotely, keeping your data safe and your software updated is harder than ever. Legacy server rooms and hardwired offices become a drain on your time and your budget, while security threats grow larger every day. Do you feel like you're juggling constant software upgrades and security patches, yet you're not getting the transparency and security your company needs?

The Solution

With Cloud PC, you can stream your operating systems, software, and data live from the cloud. And that lets you:

- Give employees one, secure, single sign in to log onto your system, from any location, on any device

- Offer on-the-go access to all your software, teams, emails, files, messaging, video calling, and more

- Get automatic system and security updates, streamed automatically from the cloud

- Buy cheaper hardware, and replace it less, because you've eliminated the need for constant system upgrades

- Upload software, install upgrades and manage permissions for your employees remotely, through the cloud

- Analyze usage trends and run custom report through the Cloud PC admin panel
