## WaveLinx System

### Room Control | Outdoor | Commercial

A cost-effective method for deploying a sensor network that exceeds code requirements and creates a foundation for future IoT value-added applications.

### Easy Installation

Integrated sensors – take down old light, put up new light, and walk away. Relay packs – wire the voltage and the 0-10v back to the switch pack. One switch pack per zone of lighting.

### Easy to Scale

One WAC (wireless area controller) covers roughly 100 ft of desired zone coverage. System can run as multiple stand alone WAC systems or can be networked with the Trellix system.

### Easy to Commission

Mobile app connects to the WAC's own WiFi, allowing a seamless system setup without the need to connect to the building's existing network. Commissioning services available.

### Easy to Secure

The UL 2900 certified security system has no physical path from WiFi to ethernet ports, making it impossible to hack WAC system from WiFi. WAC username and passwords also required.

### Easy to Manage

Connect to the WAC's WiFi and control the system through the app. Setup user access levels, program devices and zones, create lighting schedules, and more.

## WAVELINX SYSTEM COMPONENTS STOCKED AT E.B. HORSMAN

With dedicated Lighting Control Specialists serving all customers.

### WaveLinX System

#### Designed for Contractors

When designing with the WaveLinX System you are guaranteed to meet all ASHRAE requirements, while providing flexibility and convenience for the end-user.

#### Option I - Integrated Fixture Installation

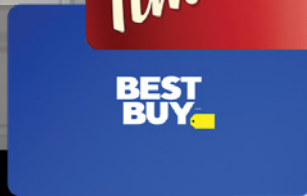

Fixtures with integrated sensors come standard with occupancy, vacancy, and daylighting features. Because each fixture already has a built-in relay, switch leg power runs are not required.

#### Option II - Power Switch Pack Installation

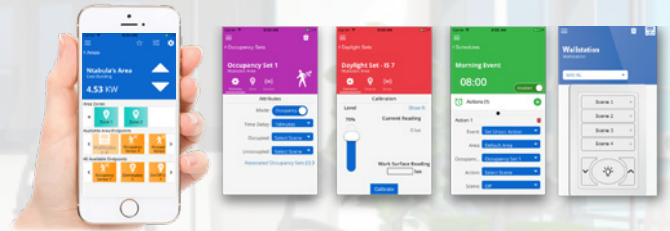

The WaveLinX System can control any 0-10v fixture with the relay packs. Simply install one pack per zone of lighting, no home runs required.
