Your behavioral assessment tools may be putting your patients and your practice at risk.

**#1 INDEPENDENCE MATTERS**
nView screeners and interviews were independently developed by trained psychiatrists with no connections to drug manufacturers.

**#2 THE CLINICAL STANDARD**
The PHQ-9 and other screeners attempt to validate against nView’s screeners and interviews since they are viewed in the industry as the clinical standard of excellence.

**#3 ALL IN ONE**
The PHQ-9 only screens for symptoms of depression – no matter what the cause. This leads to misdiagnosis of complete depressive disorders. nView solutions are comprehensive and screen for all major mental disorders in one solution.

**#4 REIMBURSABLE**
In addition to the M.I.N.I. structured interview, nView offers a full range of screeners, severity scales and monitors that are reimbursed by all of the major payers.

**NOT BIG PHARMA**
The PHQ-9 was built and owned by one of the drug manufacturers that offers the leading anti-depression medications.

**MENTAL HEALTH GOES FAR BEYOND THE LAST 2 WEEKS**
The PHQ-9 asks a patient to self-report over the last two weeks. This can lead to under-diagnosis or even worse – misdiagnosis – which can increase risk in some patients (i.e. those with Impulse Attack Suicidality Disorder.)

**65.9% MISDIAGNOSIS RATE for Major Depressive Disorder**

*National Institutes of Health Report (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3184591)

**WIN-WIN**
nView screeners and interviews are a must-have to improve the health of your patients and your practice.

**CITED BY**
regulatory and clinical studies, and clinically validated and peer reviewed.

**REIMBURSABLE**
In addition to the M.I.N.I. structured interview, nView offers a full range of screeners, severity scales and monitors that are reimbursed by all of the major payers.
