

The **TREE OF LIGHT** is a living sculpture formed by 7 bundled tubes (stems), growing from 7 interactive pavilions, which twist around each other and ultimately come together at the apex. The tubes incorporate video and lighting technology that generate both illumination and content like text, movement and image. These pavilions function much like leaves, providing shade and absorbing power to convert into energy that flows through the stems of the tree. This piece will celebrate the local community, honor the land and create a sense of peace and wonder for all who visit.
