

Created Design of circular stepped wall situated at the WEST and EAST side. These walls are 200' of height & 90' of thickness. These walls consists of three steps of width 30' of each step. Top of the wall can be reached by four elevators situated at the corner of West and East side.

Circular walls are hollow so that caves are interconnected . Design of circular stepped walls achieve vertical lanscape, running water falls from top of the walls to the excavated area. Water bodies and leisure pools are created on the platform of the stepped walls. Walls to be designed facilitating a gradual slope to either side of it for the construction of the steps. Pathways of steps enjoy greenary, water cascades and natural aesthetic. This place also acts as a resting hub for the migratory birds. Standing on the top of the circular walls one will experience spectacular view.

Bridges connect the three oval like structures which are 200' and 145' high above the river.

Central oval structure is created for meditation and spiritual comfort i.e. SPIRITUAL CONFLUENCE that is acoustic proof structure. This area spans over 20000 sft surrounded by passage and step to have the surrounding view.

Other two oval like structures which are 145' high over the river . one towards the EAST side is for music, dance & orchestra i.e. MUSICAL CONFLUENCE which is acoustic proof structure . This area spans around 6500sft surrounded by passage to have the surrounding view.

Another oval like structure which is 145' high above the river towards WEST side is for PLANETARIUM which acoustic proof structure. This area spans around 10000sft surrounded by passage to have the surrounding view.

These three oval like structures are supported on the arches fixed on the circular wall which is above the confluence point and St. John street overlook plaza.

Multiple activity is reflected on the ground floor of the WEST side. Space for AMPHITHEATER is created for community gathering , events Cultural central Plaza and show. Next to the Amphitheater,

there is broad walkway adjacent to the riparian set back of LOS GATOS creek which surround wall for walking & jogging.

Arena green WEST and EAST are connected by huge tunnel by excavating upto 150' deep and tunnel can be created to join EAST & WEST site . Tunnel is 60' below the river (tunnel ht.is 90')so that tunnel will not disturb the box culvert flood controls measures.

Excavated space will be more thrilling and adventures for climbing up,down and can be used for trekking,thermal pool,bathing spot and water sports.Water from rainwater harvesting and underground water can be used for water cascade,waterfalls and site to irrigate.Net zero strategy is also achievable.

Design elements like circular wall,oval like structure (Spiritual confluence,music confluence and planetarium) can serve dialogue with history and future.Also act as catalyst for economic development and ecological balance.
