

A girl, a future woman - a symbol of creativity, holds a small interactive robot in her hands - a symbol of work of the human mind.

Opposite, there is Robot-2, who holds a boy in his arms. This robot acts as a protector of a man, created by his own hands.

Robot is equipped with a solar battery-umbrella, which protects against the sun and collects energy.

The figure is surrounded by a bench for seating.

After sunset, collected energy of Robot-2 paves a light road and connects both parts of the structure, lightning the hearts of the children and a sign of infinity between the mind and heart.
