

The proposed installation encompasses innovative, inclusive spirit of San Jose, both in terms of its aesthetics and function. A cloud of particles oscillating around a focal point is a metaphor for innovations created in a collaborative process of ideas' exchange. This ephemeral installation is based on multiplicity of realms present in the natural surroundings of San Jose. Human habitat, as one of the realms, is elevated from the ground to disrupt the traditional sense of coexistence with nature through change of perspective. The longitudinal path through the installation joins all functional elements on its way, creating cohesion and balance.
