

- THE PILLARS -

Organic connectivity conceptualized in bold, timeless architecture.

Designed as three pillars for public activities that integrate art, science and technology. Rhizome structures underground hold space for events, gatherings and laboratories. The Cloud Walk and Helix stairway interconnect overlapping Sky Platforms on The Pillars.

Enduring and flexible.

The design and construction are resource-efficient by using self-sustaining technology, applying net-zero energy design principles and including permanent as well as temporary architectural elements.

We are open to collaboration and inclusion of other ideas and proposals from this competition.
