

Tunuk creates a place for collaboration to solve global environmental and social problems, while also celebrating our emerging ability to integrate technology and nature into the built environment. The design consists of 4 buildings linked by an elevated path, which together appear to cradle the nature within the site. To create a sense of permanence and holistic design, the structures rise out the ground, overtaken by green walls and planters, and are lit with bioluminescent lights at night. The 4 buildings house night life, contemplative spaces, an exhibit space, and a plant nursery.
