

Reflecting technologies developed locally and inspiring excitement about the future, the structure's core is a sixteen-floor vertical park. The first floor provides concessions and exhibits. At the top, an elevator stops at a restaurant and the observation deck. Food service, facilities, and management are located below grade. A drone delivers orders via a column, returning with used tableware.

LED mesh panels form a transparent curtain driven by actuators that transform the shape of the mesh. The swarm of robotic actuators provides structure and form to the screen. The changing shape enables the building to be new in appearance daily, both in displayed content and physical form.
