

PROJECT SUMMARY

Synthesis of Duality

The design uses the confluence of Guadalupe River and Los Gatos Creek as an inspiration and an expression of duality.

San Jose itself can be described as a union of two powerful forces: Nature and Technology.

At the meeting point of two rivers, the very site suggests the concept of two forces becoming one. The West observatory tower symbolizes Nature, being splattered with myriad of planters; while the East tower is an embodiment of Technology. Both are connected with a suspended pedestrian bridge which unites them physically and symbolically.
