

The Quantum Confluence

Here stands an icon for the progressive development of humankind. This self-sustaining, experiential sculpture uses natural light and timeless materials to capture the essence of instantaneous human connection through analog means. The sculpture harnesses minimal energy from the sun, serving as a beacon of hope and representing the day when humanity is able to achieve a net-positive impact on our world — when we are able to balance technological advancement with respect for nature and each other. The Quantum Confluence invites you to experience two perspectives simultaneously through nothing more than reflection, physics, and light.
