

Vantage Route

Derived from a long standing tradition of cultural and social trails our intervention, *The Vantage Route*, provides a point of connection between significant landmarks in the area through an elevated looped walkway. This raised avenue hovers over the city bridging both sides of the river and allowing the park to interact with the urban space beyond. Conceived of as an inclined ring that navigates various places of interest it is anchored by a square linear tower which provides a strong point of reference. The entire composition becomes an interplay of movement and balance.
