

Elevated Blaze Project Summary

“**Elevated Blaze**” is both a wayfinding device and an illuminated icon. A walkway with reflective cladding, and a fog deployed by the supporting poles of the walkway, create a floating effect illuminated at night. The walkway and the field promote connections between the past and future of the city, symbolizing and synthesizing elements of the immediate natural and urban environments while providing fresh views to its pedestrians and a distinctive visible presence from afar and from above: an impression as like the bow of a vessel, flowing along just as the convergence of creek and river below.
