

Project Summary

Our proposal for Arena Green, tilted “Cloud” translates itself into an intertwining spiral ramps that serve as the city social interacting platform for people from diverse backgrounds. The spiral promenade connects Arena Green East, West and the confluence point, elevates people both physically and metaphorically. This structure encourages dynamic flow and circulation from different directions at the site, allow people to explore, experience and enjoy in between nature and the continuous loop of walkway. This public open space improves the vitality of the site and offers an alluring break from the city streets.
