

CONNECTING NATURAL PATTERNS

An iconic landmark as a distinctive landscape for San Jose that could be recognize for its unique environment, community and creative values.

The proposal's goal is to create a unique environment that brings a landmark as a urban park, through the study of the conditions of the place where the land is located near both margins of Conservancy Guadalupe River Park , where "The Cats Creek and the Guadalupe River" merge, thus humanizing and rehabilitating these areas as a complete green corridor.

Concepts established in layers like parts of a flower in nature are used to construct the project. Integrated urban equipment and vegetal planting to be proposed. Understanding the delicate balance of urban nature.
