

**THE  
GOLDEN GARDENS  
IN THE SKY**

**The World-class SV landmark**

The Golden Gardens in the Sky (tGGitS): a distinct experience on Planet.

It emerges firstly as new concept, since height limit challenges this world-class landmark.

ONE:

At 182ft-high, gardens within wide floorplan are lighting receptive: water mirrors reflect golden surfaces and sunlight, creating moments:

By night, an Arc lit.

By day, sunrises and sunsets are changing spectacles.

TWO:

The tower become Arc. Setting free-from-humans areas at its core, nature (*vegetation, clean-air, birds*) is enhanced. Multi-use one-store buildings manages ground links.

Even with a prismatic (*feasible and fast-to-construct*) structure, tGGitS achieves both world-landmark status and city links in a *sensitive-to-nature* way.
