

### **San Jose Global Iconic Landmark**

Imagine extraordinary illumination, and the confluence of our deep agricultural and high technology roots. What says this better than trees? Not just those that grow in soil but also those that demonstrate electronic innovation as an interactive LED illuminated Community Tree visible for miles.

This community tree is a metal sculpture created by local artists with individual plates similar to the Statue of Liberty. The tree will be a destination for entertainment, gatherings, tours and tourists from around the world. Power will be a net positive energy capture stored in power modules.
