

## PROJECT SUMMARY

"BRAIN STORM" is a monument with a helical structure sat in "brain-shape" maze for celebrating innovation. A ramp is built along the spiral for viewing the cityscape. The maze is laid out in the way of "integrated circuit" that reflects Silicon Valley as the origin of the technology. A street with a row of "Digi-Trees" is planned on the south side. There are two rows of benches under the "Digi-Trees", each is engraved a computer pioneer/inventor's name for commemorating his/her contributions. Dynamic and rich lighting effects are realized by manipulating "0/1" LED fixtures on the "storm" and "digi-trees".
