

Summary:

The San Jose Light Tower (SJLT) will mark San Jose as the birthplace of the Silicon Valley revolution in information technologies. It will rival the Canton Tower as a modern-day tribute to innovation and creativity. It can also celebrate the sacrifices that the local medical community paid to keep the area's population safe in this pandemic, much as the plague Towers of Europe did.

This 200ft interactive Light Tower will be gently and fluidly animated with LED light outlining its complex geodesic structure, triggered by inputs from weather sensors and a smart phone app.
