Urban Confluence Silicon Valley Competition

Project Summary

Project concept is based on global village and world without the border idea. Our approach was to develop 4 individual buildings at each corner of the site. Each building, symbolically is representing one continent which are tied together at the top, which all the together is the representation of global village and also in a symbolic way, it is representing that we will be successful when we are all together and connected.

Another main concept of this project is transparency which was the biggest promise that technology brings to our life that everything will be transparent and there won't be anything hidden.

.

Project design intent is to be operated independently from infrastructural support services such as the electric power grid, gas grid, municipal water systems, sewage treatment systems, storm drains, communication services, and in some cases, public roads
