

## VORTEX 2200

Inspired by vortices that are generated where two rivers meet, VORTEX 2200 is a circular gallery dedicated to public interactive and educational activities relating to water.

The project establishes an extension of nature by accommodating animals and vegetations, hence offers lush green and enjoyable promenades to visitors.

VORTEX 2200 is self-powered. The river flows provide hydro-electric or mechanical power to the project's energy needs.

Emphasizing the eternal value of our vital and vulnerable resource, the project integrates with the city as a new landmark, where visitors find themselves surrounded by nature again.
