

## TEMPLE OF NATURE

Temple of Nature will act as a bridge pavilion which will connect the Arena green west to east through Guadalupe River. The regular hexagram plan allows an individual to capture the breathtaking vistas of Arena Green through its six fins, which are formed by doubly sheltered hyperbolic paraboloid roof. The circular path surrounded the central void inside the Icon allows an Individual to observe the beauty, sound, and depth of the Guadalupe River. The Oculus (circular opening in the center of a roof) enables the penetration of sun rays inside the structure. Sunrays combined with mist will form a "Rainbow" inside. The mist will be created through an artificial mechanism located around Oculus. Natural lighting, Open cross ventilation, and use of locally available material will minimize the carbon footprint, hence will make this Icon as "Net Zero."
