

Dome Sequence consists of a series of multipurpose geodesic domes on the Arena Green. Clad in semi-translucent photo-laminated glass, their thematic imagery reflects Silicon Valley's history, environment and future: Technology, Agriculture, Pre-Colonial life, Natural History and Conservation.

In the daytime, sunlight refracts the photograph colors into the interior space, dappling the ground and surrounding visitors with multi-hued light. At night, the domes are illuminated from within, creating an atomized and interconnected sequence of colorful visual experiences. The domes' height and illuminated colors make them appear as a new constellation visible from the highway, the air, and local streets.
