

ALL ACCESS

Vertical white COLUMNS on both sides of the park create an open circular visual FORUM. These columns connect at the top section to each other by diagonal lines. They form an abstract linear cloud that contains lighting fixtures that generates an ORIGINAL EXPERIENCE each night.

IMMAGINATION is the limit. The INTERCONNECTED world provides the possibility to be present from far away. The neutral all white design provides the blank canvas for the CHROMATIC light design that night. Anyone would be able to design a PROGRAMMING CODE for the LIGHT SPECTACLE. Each light design can be unique in which the designer can play with infinite colors, patterns, movement, decide the timing and form of the whole structure so it can be transformed. GLOBAL COLLABORATION is the essence of the EXPERIENCE. Each design will reflect its designer and create its own IDENTITY. Each NIGHT will be a UNIQUE DISCOVERY.

These vertical columns also provide the support of floating ISLANDS enclosures high above the ground that are decibel free oasis of airplanes and cars. This FREE SPACE enclosures the park, providing perfect sight points towards the river and protecting visually the park from the surroundings that need to be excluded- the continuous noise and view of the highway and the not attractive urban parking scene. The Free Space can be used by the COMMUNITY as its needed. It can be a linear museum, yoga class spaces, rain day activity centers, children playgrounds, riparian induction information spaces, or anything that is required.

As few natural untouched landscapes exist in the area, the idea is to AFFORESTATE as a RIPARIAN ECOSYSTEM all the terrain that is free of existing vegetation, and to incite that all of the site becomes one. This can be done because the concept of the project is to touch the least of the site, by placing all the structure on columns. The white color of the structure will emphasize the green vegetation of the park and create a FREE CIRCULATION gesture to generate discovery.
