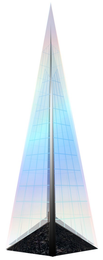
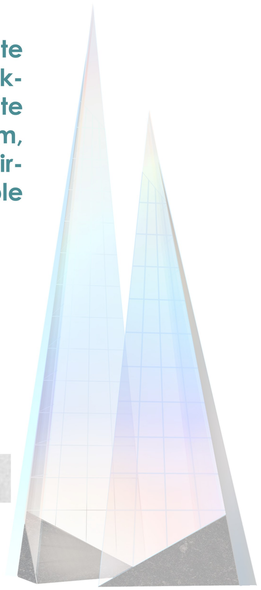
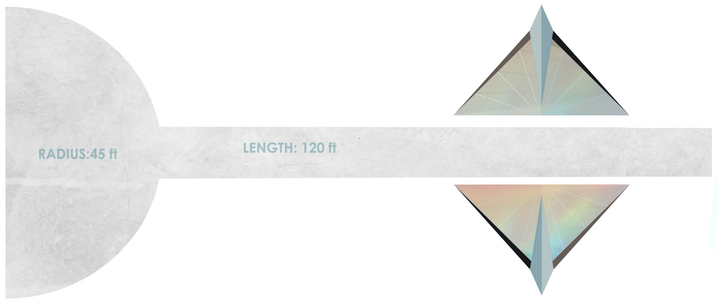
Dream

"Dreams Shape the Future", Silicon Valley success story where innovations and dreams become true, is my inspiration towards creating this iconic structure. It is a memorial to every battle that mankind might face to create a better future. It's not easy to make your dream come true neither will happen by luck; it is a vision mingled with confidence, strong will, plan, action, and hope.



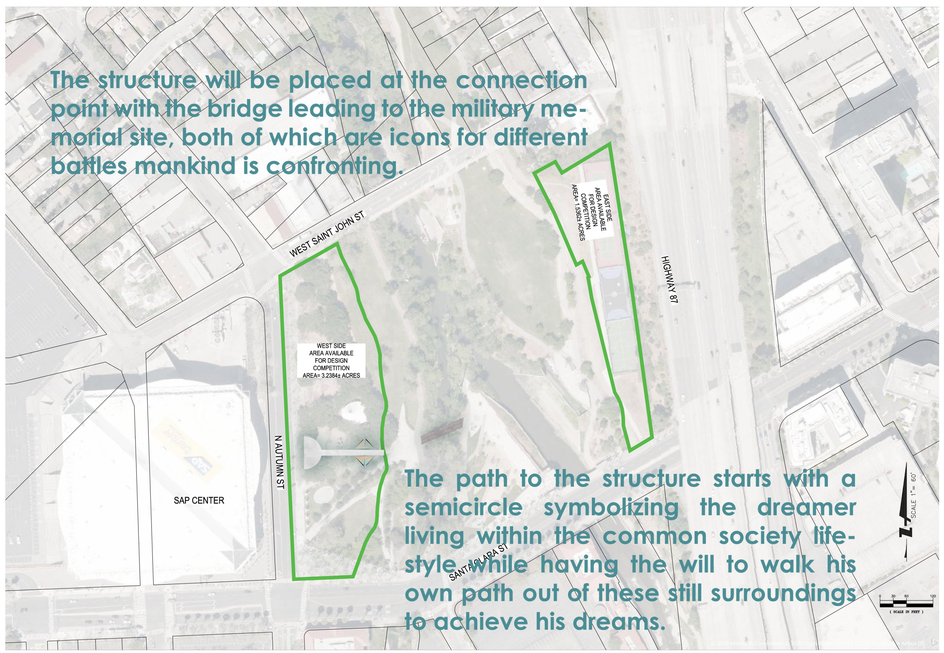
The iconic structure is designed like a high gate pointing to the sky as a symbol for freedom of thinking without limitations. The base of black granite stone symbolizes vague imagination of the dream, while it will be engraved with the names of inspiring people who had such dreams and were able to make them come true like Steve Jobs.



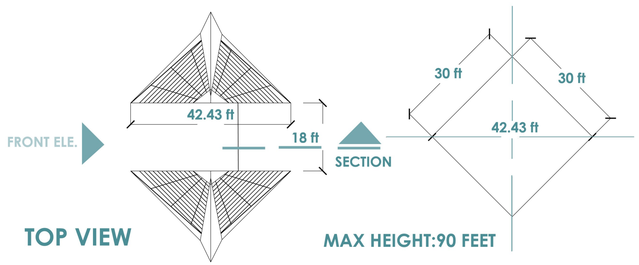


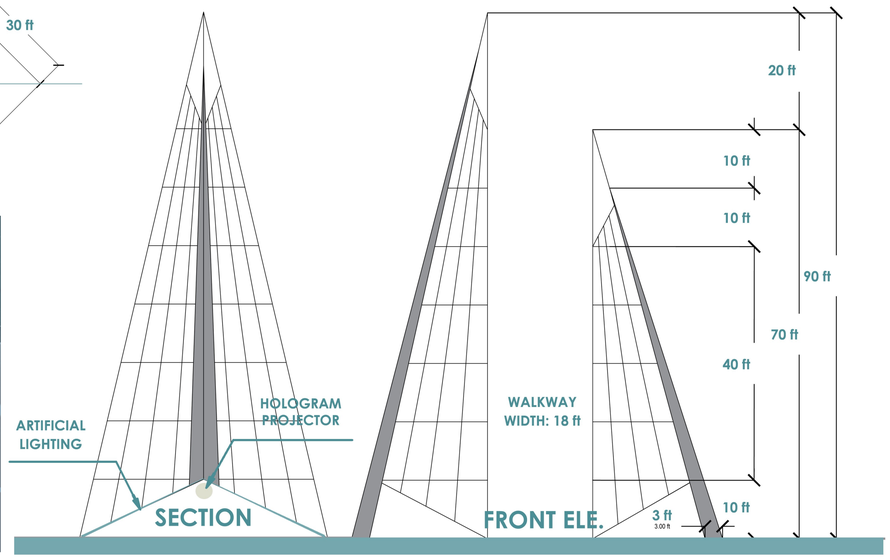
The steel skeleton of the structure will be peering the design components for a symbol of confidence and strong will. The upper part of this iconic structure will be the holographic prism glass panels with gridded divisions that symbolize the planning and vision which will be reflected in excellence and beauty.

The lighting of the structure during the daytime will be the reflection of sun rays to be broken through the prism glass panels into spectral colors adding fantasy to the park atmosphere.



The structure will be placed at the connection point with the bridge leading to the military memorial site, both of which are icons for different battles mankind is confronting.

The path to the structure starts with a semicircle symbolizing the dreamer living within the common society lifestyle while having the will to walk his own path out of these still surroundings to achieve his dreams.




During the nighttime, the sculpture will be lighted by embedded artificial lighting and hologram projector to transmit light within the structure. Such a lighting system is a type of "kinetic source of light" as a solution to prevent glare on the river. The walking path flooring will be made of light-transmitting concrete allows the light underneath to pass.
