

## ' SILICON LIGHT TUBE '

If at the universe level light measures both space and time, here in San José, light measures no more than 200 ft and represents the meeting of both.

I am the link between past and future. I am made of the representation of my space and my environment. I'm simple, steady and shine thanks to the others. What is offered to me during the day, will be given back to you once the sun disappeared.

I use recycled glass. My energy is provided by the sun, a part is directly reflected on the tower the other saved for night use and water drizzle. I want to represent and inspire the future by my alternative way to use energy. My water drizzle is here to highlight solar rays, to refresh visitors and to keep away birds.

Rays can be reflected from different parts of the parc to highlight different places and to offers messages.

My design represents a symbol, which is simple without exotic curves to represent stability over time and élégance.
