

The HIVE at Urban Confluence Silicon Valley aims to create a multi-functional urban space which challenges the way humans perceive each other and advocates for a mutual relationship between mankind and nature. The design was composed of 8010 hexagonal modules, each includes a solar panel, LED lightings, a display screen, an environment sensor, drainage systems and micro-climate modifiers to construct a prototype of future artificial environment. A symbol of technology, diversity and connection, the HIVE establishes a destination which bridges the past to the future and expresses the spirit of innovation at San Jose.
